

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A device that interfaces with a remote network, the device comprised of:

    a media reader;

    an application configured to control playback of content from a medium when inserted in the media reader, the application configured to play back content from the medium based upon control commands including advertising that is received from a service via the remote network.

2. (Original) The device of Claim 1, wherein the media reader is one selected from the group of optical disc drive, magnetic disc drive, and a flash memory card interface.

3. (Original) The device of Claim 1, wherein the device is a portable wireless device that receives control commands from the service via a wireless coupling.

4. (Original) The device of Claim 1, wherein the received control commands control at least one of the selection and order of content played back by the application.
5. (Original) The device of Claim 1, wherein playback of a received advertisement is required prior to playback of content from the medium.
6. (Original) The device of Claim 1, wherein selection of portions of content for playback is selectable by a user, the application configured to monitor content selection and to transmit indicia of content selection to the remote network.
7. (Original) The device of Claim 1, wherein selection of portions of content for playback is controllable by the application, the application configured to monitor indicia of user preferences with regard to currently playing content and to transmit indicia to the remote network.
8. (Original) The device of Claim 7, wherein the indicia includes

at least one of a level of content playback and a user provided indicia.

9. (Original) The device of Claim 1, wherein the application is configured to play back portions of content only up to a predetermined number of times.

10. (Original) The device of Claim 1, wherein the advertisements are configured to only enable playback of content for a predetermined time period.

11. (Original) The device of Claim 10, wherein selection of portions of content for playback is selectable by a user, the application configured to monitor content selection and to transmit indicia of content selection to the remote network.

12. (Original) The device of Claim 11, wherein the advertisements are played back in between the content selected for playback.

13. (Currently amended) A computer program stored on a machine computer readable memory medium, the program being configured to

control playback of content from a medium based upon advertising content that is received from a remote device.

14. (Currently amended) The computer program of Claim 13, wherein the content from the medium is at least one of audio content and video content.

15. (Currently amended) The computer program of Claim 13, wherein program is configured to control at least one of the selection and order of content played back from the medium in response to the advertising content.

16. (Currently amended) The computer program of Claim 15, wherein playback of a received advertisement is required prior to playback of content from the medium.

17. (Currently amended) The computer program of Claim 13, wherein the program enables selection of portions of content for playback by a user, the program configured to monitor content selection and to transmit indicia of content selection to the remote device.

18. (Currently amended) The computer program of Claim 13, wherein  
program controls selection of portions of content for playback, the  
program configured to monitor indicia of user preferences with  
regard to currently playing content and to transmit indicia to the  
remote device.

19. (Currently amended) The computer program of Claim 13, wherein  
the program is configured to play back portions of content only up  
to a predetermined number of times.

20. (Currently amended) The computer program of Claim 13, wherein  
selection of portions of content for playback is selectable by a  
user, the program configured to monitor content selection and to  
transmit indicia of content selection to the remote device.
